

Straten N&G

The Straten N&G system is designed in a way that enables security forces to engage targets from the left, and right, from the front, up or down, and to move to each of these shooting positions very rapidly without the removal of hands from the weapon. This shortens reaction time and increases accuracy in sudden engagement situations. The weapon system can be triggered completely from behind cover.

The advantages that the Straten N&G lay in two main areas: "The Operator" and "The Operation Management." Advantages for the Operator are those that the officer or soldier carrying the Straten N&G experi

ences. These advantages are the following:

- The Operator can engage a target located behind a corner without exposing himself. The Straten N&G can save his life.
- The Straten N&G can be used as an "extension" to the user's eye. It allows the Operator to see over high objects and under raised objects quickly and efficiently.
- The Operator shooting accuracy increases due to the Straten N&G's laser guided camera aim.

Advantages for Operation Management are those that the Central Command experiences due to the use of the Straten N&G being carried by the Operator. These advantages are the following:

- Central Command receives a live video feed of what is happening at the front line. This leads to better understanding of the situation and can improve decision-making.
- By using an additional screen the officer or soldier located behind the

Straten N&G Operator can see the same view that the Operator is seeing on the Straten N&G screen. This enables him to better support the Operator and improves coordination.

- The Straten N&G can be set up to facilitate recording of the Operator's screen. That means that all Target Engagements are documented. This is an effective tool to be used for legal and training purposes.

Systems that accepts various firearms

Glock 17C

40mm grenade launcher

AK-47/74

APR 5.56

Paintball

Micro

Cat camouflage

Scorpion

Straten N&G

A high quality, user-safe product which allows "a corner" observation, sniping and assault capabilities in one.
